Special features and options

In the course "Workshop with Antonio Pigozzi", we learn fundamental techniques of Italian nativity scene craftsmanship. In particular, this course is intended to gradually introduce the prevailing techniques of the outstanding Italian nativity scene builders. We will see special tricks and tips for making walls, paths, rocks and many other things from simple Styrofoam. Special refinements in botany are covered, as are new plastering and gypsum techniques. Antonio and his assistants also show the perspective construction of a diorama nativity scene. The unique coloring is also part of the course. Here, the principle of dark to light is clearly demonstrated. Enjoy the course and bring an open, receptive mind!
