### Special features and options

In the course "Workshop with Antonio Pigozzi" we learn basic techniques of Italian nativity scene craftsmanship. In particular, this course is designed to gradually become familiar with the prevailing techniques of the great Italian nativity builders. We will see special tricks and tips on how to create walls, paths, rocks and many other things from simple Styrofoam. Special details in botany are also covered as well as new plastering and gypsum techniques. Antonio and his assistants also demonstrate the perspective construction of a diorama nativity scene. The unique finishing is also part of the course. Here the principle of dark to light will be vividly shown. Much joy and an open mind!
