Lodging:	If required, we are happy to recommend / inn:www.pitztalerhof.at / guesthouses:www.haus-florian-wenns.at / www.landhaus-gasser.at

Special features and options

When building a box nativity scene, all styles and nativity representations are generally possible, and we install them in a high-quality box. Three different box sizes are available, with or without doors, as corner boxes or straight boxes. For building the nativity scene representation, we mainly use Styrodur, wood and cork bark. Lighting is an important component of these box nativity scenes. LED light with a voltage of 12 volts is used here. The figure size should be adapted to the overall size (up to a maximum of 15 cm depending on the representation). An appealing background image gives the representation appropriate depth and is an essential element for a harmonious overall effect of this type of nativity scene. Box nativity scenes are especially well suited to winter representations, because their sophisticated lighting creates a particularly appealing atmosphere. Box nativity scenes should be placed at eye level whenever possible. The snow box nativity scene is a specialty that originated in Wenns in the Pitztal valley. Enjoy building!
