Special features and options

In the course "Models - Windows, Doors, Walls, Balconies", we build on the course "New Techniques" and go into great detail about the many different forms of windows, doors, etc. in nativity scene building. Here we show a larger selection from the endless variety this area offers. With plenty of creativity and by drawing on what already exists, we build models in this course that are specifically used as samples for nativity scene builders in courses at local associations and in other nativity scene workshops. These models are also helpful for achieving a broader range of detailed representations. The models are made in Styrodur, painted, plastered and grouted. We build these sample panels for both local and oriental nativity scenes. Because of the wide range this topic offers, we have extended the course by an additional day. With plenty of diligence and enjoyment in creative work, it will turn out well!
