Special features and options

In the course "Models – Windows, Doors, Walls, Balconies" we expand on the course "New Techniques" and go into great detail about the most diverse forms of windows, doors etc. in nativity scene construction. Here we show a larger excerpt of the infinite variety that this area offers. With much creativity and based on what already exists, we build models in this course that are specifically used as samples for nativity builders in courses at local associations and in other nativity workshops. These models are also helpful to achieve a wider range of detail representations. The models are executed in Styrodur, framed, plastered and grouted. We build these sample boards equally for home-style and oriental nativities. Due to the wide range that this topic offers, we have extended the course by an additional day. With much diligence and joy in creative work it will succeed well!
