Lodging:	If required, we are happy to recommend / inn:www.pitztalerhof.at / guesthouses:www.haus-florian-wenns.at / www.landhaus-gasser.at

Special features and options

In the "New Techniques" course, we mainly cover the many possibilities that materials such as Styrofoam, Styrofoam board, Styrodur, polystyrene and similar materials offer nativity scene builders. Essentially, this course focuses on building a small demonstration model. Making windows and doors for local and oriental nativity scenes in various forms, different types of masonry and new plastering options are part of this course. Four different roof coverings made of Styrofoam and a lifelike wood imitation round off the course program. An appropriate finish for the demonstration model is also included, as is grouting the masonry and brick walls. The use of different types of Styrofoam is also a topic of this course. The finished model is especially suitable as a sample for any nativity workshop. Enjoy the "New Techniques in Nativity Scene Construction" course!
