Lodging:	If required, we are happy to recommend / inn:www.pitztalerhof.at / guesthouses:www.haus-florian-wenns.at / www.landhaus-gasser.at

Special features and options

When building a box nativity scene, all styles and nativity depictions are generally possible and can be installed in a high-quality box. Three different box sizes are available, with and without doors, as corner boxes or straight boxes. For building the nativity scene, we mainly use Styrodur, wood and cork bark. Lighting is an important component of these box nativity scenes. LED light with a voltage of 12 volts is used here. The figure size should be adapted to the overall size (up to a maximum of 15 cm, depending on the depiction). An attractive background image gives the depiction the appropriate depth, and the background image is an essential element for a harmonious overall effect of this type of nativity scene. Box nativity scenes are especially well suited for winter depictions, because sophisticated lighting gives these nativity scenes a particularly appealing atmosphere. Box nativity scenes should be placed at eye level whenever possible. The snow box nativity scene is a special form that originated in Wenns in the Pitztal valley. Enjoy building!
